Abstract

At the confluence of two great paradigms such as [Edge Computing](#) and [Artificial Intelligence](#), [Edge Intelligence](#) arises. This new concept is about the smart exploitation of [Edge Computing](#) by bringing together reasoning and learning by [Artificial Intelligence](#) algorithms and the sensors/actuators computing capabilities. Security is the third paradigm that must join the team in order to have resilient and reliable systems to be used in real-world applications and use cases. Hence, smartness is, in this context, a puzzle of several independent pieces which, once fitted, can derived unprecedented
